Next Level Sanitisation solution for you Business

- Social distancing, Masks and hand sanitisation all have limitations. Studies have shown that the virus can remain active on many surfaces including fabrics, woods, handles and in-air.
- We at Bio Safety Services have introduced safe and effective ways to sanitise clothing, surfaces and the environment.
- In a Nutshell our Next level sanitisation technology uses a disinfecting liquid which kills viruses and germs (Chlorine based) by converting this liquid into a dry mist through a uniquely designed sonic box which delivers this mist to premises via an automated spraying bollard which also includes temperature check installed at the entrances of various establishments
- We also supply Air-Conditioned Filters Disinfecting Towers on Wheels and Room deep Cleaning devices and sanitisation cabins for staff rooms.

Our Service Packages

We provide tailored packages according to your requirements

- Supply of Spraying Bollards with Temperature Check at the Main Entrance

Pandemic Pain from Inaction

- The Current pandemic has already cost more than 900 Australian lives and close to 100 million Cases worldwide.
- Corporate leaders have an obligation to minimise the spread of the virus for their customers and staff by using the most effective technology available as a community service. We are also proud that this also gives a competitive advantage.
- The possibility of litigation arising from non-compliance to OH&S regulation & Common law implications may be enforced.

Cost Benefit Analysis

- There is sound business proposition that the customer perception of next level sanitisation measures will bring confidence back among returning and new customers resulting in increase in the customer numbers.
- Similarly, it can be argued that due to sprayings cabins in staff rooms where staff can voluntarily disinfect themselves may have positive impact on the morale of staff thus increasing productivity.
- The cost of rental package will be fraction of the revenue generated from the increase in customer traffic volume.
